

Experienced Senior Software Engineer with a strong focus on customer-centric solutions and a deep understanding of customer behavior. Dedicated to improving the customer experience, engagement, and retention. Proven track record in delivering functionally rich, robust, and user-friendly applications. Thrives in dynamic environments, demonstrating a strong work ethic, positive energy, and innovative thinking.

Languages and Technologies:

- JavaScript; Nodejs; VB.NET; C++; C; Java; C#; SQL. DevExpress
- Visual Studio; Microsoft SQL Server; DevExpress, LAMP Stack (Linux, Apache, MySQL, PHP/Python), WebRTC
- IOT (internet of things) using Raspberry pi & esp32

EMPLOYMENT

Software Engineer	Freelance	Nov. 2017 – May 2023
--------------------------	------------------	-----------------------------

Markad Racing video game

- Steered the full life-cycle development of a mobile video game on iOS and Android platforms, from concept design to development and launch, with 500k+ downloads within the first year, surpassing the initial target by 25%.
- Exercised a complete understanding of object-oriented programming and SOLID principles in the development process.
- Conducted code reviews to ensure the quality and correctness of solutions delivered by peers.

Software Engineer	Sharjah Social Empowerment Foundation	Aug. 2015 – Nov. 2021
--------------------------	--	------------------------------

Client Onboarding Platform

- Architected and executed VB.NET and MS SQL Server-based relational databases, web forms, and file systems, automating 70% of administrative tasks, enhancing user experience, and streamlining client onboarding.
- Integrated an online payment gateway into the existing website, stimulating a rise in donations.
- Built an online attendance system during the COVID-19 pandemic, facilitating seamless remote work transition.
- Managed the organization's main server and CISCO IP Phone system, ensuring uninterrupted communication and server uptime.

Software Engineer	Ayah Computer Information Systems	2010 - 2015
--------------------------	--	--------------------

Hospital Management System

- Conceived a VB.NET and MS SQL Server-based medical system platform, improving patient data management by 20%.
- Deployed the solution in 7 major polyclinics, provided comprehensive staff training for efficient system usage, and offered ongoing technical support with a satisfaction rate of 98%.

TECHNICAL EXPERIENCE

Projects

- **WhatsApp CRM [GCCMsg.com](#)** (2022). Engineered a CRM solution featuring WhatsApp REST API integration, using Node.js and .NET, for streamlined mass broadcasting and QR code-based contact importing. This innovation boosted customer engagement by 40% and simplified contact management processes for participating firms.
- **Robot Jockey for Camel Racing** (2022). Engineered a Raspberry Pi and ESP32-based robot jockey for camel racing, utilizing object-oriented programming and leveraging WebRTC for real-time communication and enabling long-distance control. Ensured seamless operation and performance of the robot jockey, leading to its adoption in major camel racing events across the UAE.
- **Real Estate Management Software** (2011-2023). Conceptualized, designed, and deployed VB.NET real estate management software, enhancing operational efficiency by an average of 30% for 128 companies in the UAE.
